

MAXXEN ENVIRONMENTAL POLICY

INTRODUCTION

As MAXXEN Energy, while operating in the field of lithium-ion battery production, we aim to fulfill our responsibilities towards the environment and society and to comply with all applicable national and international laws, regulations and standards related to the environment. In this context, we focus on continuous improvement, protection of natural resources and prevention of pollution for a sustainable future, and acting in accordance with ISO 14001 Environmental Management System standards.

1. OUR PRINCIPLES

- We adopt an environmentally friendly and preventive-based approach as our basic method.
- We identify, evaluate, monitor the environmental impacts of our activities and take necessary measures to reduce these impacts.
- We carry out our activities in full compliance with applicable legal regulations, international standards and voluntary initiatives to which we are a party.
- We carry out continuous training and awareness activities to increase the environmental awareness of our employees and all our stakeholders.
- By closely monitoring environmental developments, we aim to transform innovative and sustainable solutions into value-creating business opportunities

2. ENVIRONMENTAL APPLICATIONS

- We are based on increasing efficiency, saving money and supporting the use of renewable energy sources in energy management processes.
- It adopts the protection of natural resources as a basic principle; Within the framework of water management, we prioritize reducing water consumption and promoting recycling.

- By adopting the 'zero waste' approach in waste management; We systematically implement waste prevention, reduction, reuse, recycling and final disposal processes.
- To reduce carbon emissions, we support the use of innovative technologies and the implementation of low-carbon practices.
- In line with the principles of cleaner production and product responsibility, we aim to continuously improve our environmental performance.

3. GOVERNANCE AND RESOURCE MANAGEMENT

- Roles, responsibilities and authorities within the organization are clearly defined in order to effectively implement our environmental policy.
- Regular training programs are carried out to increase the environmental awareness of our employees.
- Necessary financial, technological and human resources are allocated by the senior management.
- By encouraging information sharing and collaboration among businesses, it is ensured that environmental standards are implemented holistically and consistently.

4. PERFORMANCE AND TRACKING

- We regularly measure, evaluate and report on our environmental performance.
- We create performance indicators (KPIs) to set targets in the areas of energy, water, waste and carbon management.
- When non-compliance is detected, we plan and implement corrective and preventive actions.
- The effectiveness of our environmental policy is regularly reviewed and necessary improvements are made.

5. COOPERATION WITH STAKEHOLDERS AND SOCIAL CONTRIBUTION

- We ensure that our suppliers, subcontractors, visitors and business partners adopt and implement their environmental responsibilities.
- We support environmental awareness activities and information sharing in order to contribute to the development of society.
- We aim to increase environmental awareness through social responsibility projects.

RESULT

The MAXXEN Energy Environmental Policy reflects our commitment to combating climate change, protecting natural resources, and continuously improving environmental performance. This policy is not only an obligation, but also an expression of our responsibility to leave a more livable world for future generations.
